

FIRST CHOICE FOR POLYJET USERS

Maximize productivity with easy support removal for PolyJet™ parts.

The Super DT3 and CSIIIP offer automated support removal, greatly reducing labor time and increasing productivity. Compatible with PolyJet technology-driven 3D printers, and SUP706 and SUP707 support materials, these support cleaning systems are designed to thoroughly and easily clean printed models of various complexities and fine details. To protect delicate parts, the systems are equipped with active cooling. The CSIIIP also offers variable flow options allowing operators to control jet flow rates.

Dedicated to making your job easier.

The Super DT3 and CSIIIP make cleaning PolyJet parts as easy as 1-2-3:

1. Place part in basket and immerse in solution
2. Activate support cleaning system
3. Remove part and rinse with water

The Super DT3 and CSIIIP support cleaning systems also feature a no-drip top, integrated basket and lid, whisper-quiet operation and a low solution level cutoff for safe operation — making it ideal for closed environments.

Super DT3:

Easily cleans small and mid-size parts, and is compatible with Objet260™ 3D Printers.

3D Printer Compatibility:

SUP706

Objet260 Connex1/2/3™
Objet260 Dental Selection™

SUP707

Objet Eden260VS™

CSIIIP:

Get the ease and reliability of the Super DT3, but with a larger tank size to accommodate bigger parts (compatible with Objet500™ 3D Printers), or higher volume of small to mid-size parts.

3D Printer Compatibility:
